VITAMIN B6/B12 INJECTIONS PLUS MIC (FAT-BURNER)

FOR WOMEN AND MEN (MEDICALLY SUPERVISED)

Getting weekly Vitamin B6/B12 MIC Injections, is an effective way to naturally boost energy levels, speed up metabolism and lose weight.

WHAT IS AND HOW DOES VITAMIN B6/B12/MIC WORK?

Methionine Inositol Choline (MIC) Injections, also referred to as Lipo Injections, are used to help release fat throughout the body by specifically targeting its primary fatty deposits. Lipotropic, or fat burning substances include: Inositol, which helps the liver remove fat; Choline, which distributes cholesterol and prevents it from getting deposited in one part of the body; and Methionine, which is similar to Inositol, but also amplifies the combination.

Injections can be administered up to twice a week, and vitamin B-12 is supported by practitioners and users to help accelerate metabolic processes, while creating a greater feeling of overall energy. Since lipotropics directly aid in the breakdown of fatty tissue, and are also closely related to B vitamins, when used together, they are thought to intensify each others' effects and are usually injected together as part of the same treatment injection cycle.

B6 – PYRIDOXINE

Pyridoxine is required for the proper function of sugars, fats, and proteins in the body. It is also required for the proper growth and development of the brain, nerves, skin, and many other parts of the body.

B12 – CYANOCOBALAMIN

Also called *cobalamin*, B12 is an especially important vitamin for maintaining healthy nerve cells, and it helps in the production of DNA and RNA, the body's genetic material. B vitamins help the body convert food (carbohydrates) into fuel (glucose), which is used to produce energy. They help the body use fats and protein, and are necessary for healthy skin, hair, eyes, and liver. They also help the nervous system function properly.

METHIONINE

The "M" in MIC Injection, is an essential amino acid, which acts as a lipotropic agent preventing excess fat buildup in the body by assisting in the breakdown of fats within the liver. It also helps to lower cholesterol and is helpful in preventing and relieving fatigue.

INOSITOL

The "I" in MIC Injection, is a B-vitamin that promotes: The health of cell structures and nerve synapses; aids in the metabolism of fats; helps reduce blood cholesterol; and participates in the action of serotonin, a neurotransmitter known to control mood and appetite.

CHOLINE

The "C" in MIC Injection, is an essential nutrient that helps to support the liver in its processing and excretion of chemical waste products. Moreover, it is required for the transport and metabolism of fats and cholesterol, which is important for the healthy support of the endocrine, cardiovascular, and hepatic systems.

**ALL YOU NEED FOR ON-GOING NATURAL ENERGY AND FAT BURNING
ARE WEEKLY INJECTIONS OF VITAMIN B6/B12/MIC.**
